REPORT

TO

The Right Honourable George J. Shaw Lefevre, M.P., President of the Local Government Board, &c. &c.

(1893.)

Sir,

I have the honour to submit to you the following report on the marriages, births, and deaths registered in England and Wales during the year 1893.

Population.

The population of England and Wales, as enumerated on 6th April 1891, consisted of 29,002,525 persons. The natural increase, by excess of births over deaths, from the beginning of April 1891 to the middle of 1893 amounted to 782,471, and this would raise the population to 29,784,996 at the latter date. Emigration and immigration, however, cannot be disregarded in estimating a population. In the absence of precise information concerning these points, the estimated populations published in the Annual Reports are based on the assumption that the rate of increase which prevailed in the last intercensal period has since been maintained—a method which, as was demonstrated in the 53rd Annual Report (*see* pp. v–vi), is not likely to lead to serious error when so large a population as that of the entire country is dealt with.

Thus estimated, the population in the middle of the year 1893 was 29,731,100, including 14,405,925 males and 15,325,175 females (Table 1). It is on this population that the rates for 1893 in the present report have been calculated.

Marriages.

The number of marriages registered in the year 1893 was 218,689, corresponding to a rate of 14·7 persons married, per 1000 living. After 1886, when the marriage-rate was 14·2, which is the lowest on record, there was a gradual recovery for five years, the rate in 1891 reaching 15·6; in 1892, however, the rate declined to 15·4, and it further fell to 14·7 in 1893. The lowest marriage-rates per 1000 population in registration counties in 1893 were 11·2 in Middlesex, 11·4 in Hertfordshire, 12·2 in Buckinghamshire and in Essex, 12·5 in Oxfordshire and in the North Riding of Yorkshire, 12·6 in Huntingdonshire and in Westmorland, and 12·7 in Surrey; the highest rates were 15·1 in Staffordshire, 15·2 each in Gloucestershire, Warwickshire, and Nottinghamshire, 15·3 in Lancashire, 15·4 in the East Riding of Yorkshire, 15·5 in South Wales, and 17·2 in London. The highest and lowest marriage-rates in 1893 were generally in those counties which had also shown respectively the highest and lowest average rates during the preceding decennium.

The decline in the marriage-rate coincided, as usual, with a fall in the value of British exports, and in the amount per head of population cleared at the Bankers' Clearing House, and also with a fall in the price of wheat; the latter was reduced to 11·5 per cent. below the price in 1889, which, as shown in the following table, had been the lowest on record:

TABLE A.—MARRIAGE-RATE, VALUE of BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860–93.*

1893	14·7	5 13 6	10 10 7	17 14 9	26 4	218

* The figures in the marriage-rate column are not strictly comparable with those in columns 2, 3, and 4, inasmuch as the former relate only to England and Wales, whilst the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House (calculated upon the population of England and Wales) are derived from the same source.

Forms of Marriage.—Of the marriages contracted in 1893, 151,309 or 692 per 1000, were celebrated according to the rites of the Established Church, and 67,380, or 308 per 1000, otherwise. In the preceding five years, 1888–92, the mean proportions had been 699 and 301. Compared with the proportions in these five years, the proportions of marriages amongst Roman Catholics declined in 1893 from 42 to 41 per 1000, while those amongst other Christian non-conforming bodies rose slightly, viz., from 117 to 118. The gradual rise in the proportion of Jewish marriages, referred to in recent reports, was continued in 1893, the proportion being 5·1 per 1000, against a mean proportion in the preceding five years of 4·2.

First marriages; Re-marriages.—Of 1000 men married during the year 1893, 886 were bachelors, and 114 were widowers; while of 1000 women who married, 920 were spinsters and 80 were widows. The number of re-marriages, as compared with that of first marriages, had declined almost continuously from 1876 to 1891, in which latter year the proportions both of widowers and of widows who re-married stood at the lowest figures then on record (Table 7). In 1892 the proportions of widowers and widows had both slightly increased; this increase was not, however, maintained in 1893, when the proportion of widowers fell to the same level as in 1891, and that of widows to a still lower level than in that year. The number of persons married in 1893 who were described in the register as having been previously divorced, and who in the above proportions are included among the bachelors and spinsters, was 201, including 93 men and 108 women. This total exceeded that recorded in any of the preceding eight years, in which the numbers varied from 150 to 190. Of the 93 divorced men, 71 married spinsters, 16 married widows, and 6 married divorced women. Of the 108 divorced women, 74 married bachelors, 28 married widowers, and 6 married divorced men.

Ages at Marriage.—In regard to 5028, or 2·3 per cent., of the marriages, the age of one or other of the contracting parties was omitted from the register. Of the remaining 213,661 couples, whose ages were stated, the mean ages were 28·51 years for men and 26·23 years for women. The mean age of bachelors who married was 26·55, of widowers 44·61, of spinsters 25·04, and of widows 40·64 years. The mean age at marriage has been steadily rising ever since 1873, the mean age for each group in 1893 being the highest on record. Further evidence that marriage is now deferred to a somewhat later period of life than formerly is afforded by the decline in the proportion of under-age marriages. In the earlier years of civil registration the proportions of those who married before attaining 21 years of age were less than 50 in 1000 for men, and less than 150 in 1000 for women. The proportions went on increasing steadily, until in 1874 they reached their highest points, viz., 84 in 1000 for men and 227 for women; the proportions then began steadily to decline, and they have continued to do so almost uninterruptedly, the figures in 1893 standing at 56 for men, and 181 for women. (Table 7).

The registration counties which showed the highest proportions of under-age marriages among men in 1893 were Nottinghamshire, Bedfordshire, Leicestershire, Staffordshire, and Northamptonshire, these counties having also shown the highest average proportions in the decennium 1883–92. The counties with the highest proportions of under-age marriages among women in 1893 were Durham, Nottinghamshire, Staffordshire, Monmouthshire, Derbyshire, Leicestershire, the three Ridings of Yorkshire, and Essex, the highest average proportions in the preceding decennium having also occurred in these counties.

Scarcely less agreement between the figures for 1893 and those for the previous decennium was shown by the lowest proportions of under-age marriages; in both periods there were very low proportions of these marriages among men in North Wales, Surrey, Herefordshire, Shropshire,

Rutlandshire, and Westmorland, and among women in North Wales, Herefordshire, Shropshire, and Westmorland. It is plain, therefore, that the comparative frequency of early marriages in different counties is not merely a temporary phenomenon, but is one depending on persistent causes.

Signature in Marriage Register.—The men who signed the marriage register with marks instead of writing their names were in the proportion of 50 in 1000, while the similarly illiterate women were 57 in 1000. In 16 out of 1000 marriages both bridegroom and bride used that form of signature. With the progress of elementary education there has been a continuous diminution in the proportions of both men and women signing with marks; in 1893 the proportions, as compared with those in 1892, showed a reduction of 10·7 per cent. for men and of 13·6 per cent. for women.

Buildings registered for the Solemnization of Marriages.—At the end of the year 1893 there were 15,122 churches or chapels belonging to the Established Church in which marriages could be solemnized, showing an increase of 30 upon the number at the end of the previous year. There were also 11,249 buildings registered for marriage by rites other than those of the Established Church, showing an increase of 251, or 2·3 per cent., upon the number on the register at the end of 1892. (Table 9.)

Certified Places of Worship.—The number of new buildings certified in 1893 for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36. and 18 & 19 Vict. c. 81. was 552, while 101 buildings already certified were removed from the register by cancellation; the number of certified buildings recorded in the register at the end of the year was 28,218. It is more than probable, however, that some of these buildings are no longer used for worship, though the necessary steps have not yet been taken to remove them from the register by cancellation.

Births.

The births registered during the year numbered 914,542, and were in the proportion of 30·8 per 1000 persons living. The mean annual birth-rate had been 31·9 in the ten years 1883–92; compared with this average the rate in 1893 therefore showed a deficiency of 1·1 per 1000.

As predicted in the last Annual Report, there was a further slight recovery in the birth-rate in 1893; the rate for this year being 30·8, against 30·5 in the preceding year. With the exception, however, of the rates in 1890 and 1892, which were 30·2 and 30·5 respectively, the rate in 1893 was the lowest yet recorded.

The registration counties showing the highest birth-rates were again amongst the mining and industrial counties, the rates being 32·3 in Lancashire, 33·3 in Nottinghamshire, 33·7 in Northumberland and in Derbyshire, 35·4 in South Wales, 35·5 in Monmouthshire, 36·0 in Staffordshire and 36·2 in Durham. On the other hand the lowest rates, in no case exceeding 27·0, were in Rutlandshire, Sussex, Surrey, Huntingdonshire, Dorsetshire, Westmorland, Devonshire, and Bedfordshire. (Table 10.)

Sex.—The births of males numbered 465,692, and the births of females 448,850, the former being to the latter in the proportion of 1038 to 1000, against an average proportion of 1037 to 1000 in the previous decennium.

In registration counties the highest proportions of male births to 1000 female births were 1138 in Westmorland, 1089 in Dorsetshire, 1081 in Oxfordshire, 1070 in the East Riding of Yorkshire, 1068 in Sussex, and 1066 in Berkshire; while the lowest proportions were 921 in Rutlandshire, 995 in Gloucestershire, 1008 in Essex, 1009 in Huntingdonshire, 1010 in Monmouthshire, and 1012 in Cumberland.

Illegitimate Births.—The infants registered as born out of wedlock numbered 38,858: they were in the proportion of 42 per 1000 births, and of 1·3 per 1000 persons living, these proportions being identical with the proportions in the previous two years, which are lower than any previously recorded. (Table 2). In registration counties the highest proportions of illegitimate to total births were 64 per 1000 in the North Riding of Yorkshire, 66 in North Wales, 68 in Westmorland, 70 in Cumberland, 73 in Herefordshire, and 74 in Shropshire. The lowest county proportions were 28 in Essex, 29 in Monmouthshire, 32 in Middlesex, 35 in South Wales, and 37 in Warwickshire and in Durham.

Deaths.

The deaths registered in England and Wales during the year 1893 numbered 569,958, being in the proportion of 19·2 to 1000 persons living. This rate was 0·2 per 1000 higher than the rate in the preceding year, but was identical with the mean annual rate in the ten years 1883–92.

The lowest death-rates in registration counties were 14·7 in Westmorland, 15·0 in Berkshire, in Buckinghamshire, and in Dorsetshire, 15·1 in Rutlandshire, 15·4 in Middlesex, and 15·6 in Surrey, in Oxfordshire, and in Cambridgeshire; while the highest were 20·5 in Durham, 20·7 in the East Riding of Yorkshire and in Staffordshire, 20·8 in London, and 22·4 in Lancashire. (Table 10.)

Sex.—The 569,958 deaths included 291,889 of males and 278,069 of females. The death-rate among males was 20·3, and that among females 18·1, per 1000 living of the corresponding sex. Out of equal numbers living there were 1117 deaths of males to 1000 deaths of females, as compared with an average proportion in the decennium 1883–92 of 1122 to 1000. (Table 2.)

Ages.—On reference to Tables 11 and 12 it will be seen that the death-rates of males in the age-groups under 55 years, and of females in those under 45 years were somewhat higher in 1893 than in the previous year; while at the more advanced ages the mortality of both sexes declined, chiefly on account of the diminished prevalence of influenza in 1893. Compared with the average annual death-rates in the 10 years 1881–90, the rates in 1893, for both males and females, were either the same or lower at age-groups between 5 and 35 years, and above 75 years; while the mortality was higher at the age-groups between 35 and 75 years, and also at the age-group under 5 years. Compared, however, with the low rates which had been reached in 1888 and in 1889, the rates in 1893 showed excess in all the age-groups below 85 years.

Infantile Mortality.—The infantile death-rate, or proportion of deaths of infants under one year of age to registered births, was 159 in a thousand, and higher than in any year since 1870, when the proportion had been 160 in 1000. The exceptionally high rate in 1893 was mainly due to heavy mortality from diarrhœa; for, while the average annual mortality from all causes among infants under one year of age per 1000 births rose from 144 in the ten years 1883–92 to 159 in 1893, the part of this mortality attributed to diarrhœa rose from 13 in the ten years 1883–92 to 22 in 1893. The average mortality of infants from all causes in the four decennia ending with 1890 had been in the proportions of 154, 154, 149, and 142, respectively, to 1000 births. (Table 18.)

Urban and Rural Mortality.—Compared with the mortality in the previous year, the death-rate among the urban population rose in 1893 from 19·5 to 20·2 per 1000, while the rate among the rural population

declined from 18·1 to 17·4 per 1000. The death-rate in the urban population, compared with that in the rural population, was in the proportion of 116 to 100, which exceeded the proportion in each of the previous two years, but was slightly below the average proportion in the decennium 1881–90. The increased excess of the urban over the rural death-rate in 1893, as compared with the rates in 1891 and 1892, was in part due to the high mortality from diarrhœa, a disease affecting town in greater degree than country populations. The rates in 1891 and 1892, however, in the rural districts had been unusually high, doubtless on account of epidemic influenza, thus reducing the difference between the urban and rural rates, so that in 1893 the ratio of urban to rural mortality only reverted to its normal figure. This is especially shown by comparison of the death-rates in the first quarter of each of the years 1892 and 1893, for whereas in that period of the former year the rate in the rural districts had been 25·5 per 1000, and not less than 5·2 per 1000 above the average of the corresponding quarters in the previous decennium, it fell in 1893 to 18·4, or 1·9 per 1000 below the same average.

Registered Causes of Death.

The deaths, when distributed to the several classes by their assigned causes, were equivalent to the rates shown in the following table:—

Table B.—Annual Rate of Mortality, per 1,000,000 Living, from the several Classes of Diseases.

Year.	All Causes.	Zymotic Diseases.	Parasitic Diseases.	Dietetic Diseases.	Constitutional Diseases.	Developmental Diseases.	Local Diseases.	Violence.	Ill-defined and not specified Causes.

1893 - - -	19,170	3,165	20	88	3,210	1,593	9,536	675	883
Deaths 1893 -	569,958	94,126	577	2,610	95,389	47,359	283,546	20,076	26,275

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of disease in the year 1893 numbered 94,126, and were in the proportion of 3165 to a million persons living; which exceeds the proportion in any year of the decennium 1883–92. The mortality directly attributed to influenza, which in the year 1891 had attained its maximum, namely 574 per million, and had fallen to 534 in the following year, further fell to

325 in the year 1893. As compared with the average of the preceding ten years there was in 1893 a decrease in the mortality from measles, scarlet fever, and whooping-cough, whilst there was an increase in that from small-pox and enteric fever, and a very serious increase under the heads of diphtheria and diarrhœa.

It was stated in the last Report that after three years of practical immunity from *small-pox*, the deaths in 1892 had suddenly risen to 431, or 15 per million living. In the year 1893 the deaths from this disease further rose to 1457, and corresponded to a rate of 49 in each million persons living. Of the 1457 persons who died from this disease only 150, or 10·3 per cent., were described as having been vaccinated (against 12·8 per cent. in the preceding year); 253, or 17·4 per cent., were returned as not vaccinated, and with respect to 1054, or 72·3 per cent., no statement as to vaccination appeared in the certificates. In addition to the above, 127 deaths were attributed to chicken-pox, and 59 deaths to "effects of vaccination." Thus the total number of deaths either certainly or possibly caused by variola, and of deaths alleged to have been caused by the means taken to prevent that disease, during the year 1893, was 1643, or 55 per million persons living.

The deaths from *measles* in the year 1893 numbered 11,110, and were equal to a rate of 374 per million persons living. This rate is lower than the rate in either of the preceding four years. It is less by 86 per million than the rate in 1892, and less by 80 per million than the average rate in the ten years 1883–92. There was a marked decline in London, the rate falling from 799 per million in the preceding year, to 384 per million in 1893; and this decline may fairly be regarded as the cause of the decreased rate in the country as a whole during 1893, for the death-rate in the remainder of England and Wales, excluding London, was practically the same in 1893 as it had been in 1892.

The mortality, however, differed widely in various parts of the country, for while it did not reach 100 per million in Huntingdonshire, Bedfordshire, Cambridgeshire, Herefordshire, Rutlandshire, or Nottinghamshire, it was as high as 415 in Buckinghamshire, 418 in the East Riding of Yorkshire, 443 in Hampshire, 456 in South Wales, 484 in the West Riding of Yorkshire, 493 in Cumberland, 638 in Northumberland, 642 in Monmouthshire, 657 in Staffordshire, and 685 in Lancashire.

In a few other counties, viz., Berkshire, Suffolk, Norfolk, Wiltshire, Cornwall, and Somersetshire, the mortality from measles was higher in 1893 than it had been in the previous year; in all these cases, however, the rates in 1893 were below the rate for the whole country.

Scarlet fever.—The deaths from scarlet fever numbered 6982, and were equal to a rate of 235 per million of the population. This rate is higher than the rates both in 1891 and in 1892, which had been 171 and 190 respectively. It is, however, considerably below the mean rate in the ten years ending with 1892, which had been 267.

The year 1893 is the ninth consecutive year in which the deaths from scarlet fever in England and Wales have been fewer than 8000, the average number in the nine years having been 6423, and the average rate 226 per million. The lowest previous rate since 1838 had been 402 per million in the year 1884.

The highest county death-rates from scarlet fever in 1893 were 308 per million in Lancashire, 316 in Monmouthshire, 329 in London, 355 in Nottinghamshire, 356 in Herefordshire, 375 in Leicestershire, 467 in Middlesex, and 521 in Cornwall; of these eight counties, Monmouthshire, London, and Leicestershire had also shown excess in 1892, while the death-rate from scarlet fever in Lancashire had exceeded that for the whole country in every year since 1882.

Of 1596 deaths from scarlet fever which were registered in 1893 in London and in the Metropolitan Asylum Hospitals situated outside London, 921, or 58 per cent., occurred in public Institutions, against 807, or 69 per cent. of the total deaths similarly reckoned, in 1892. The reports of the Metropolitan Asylums Board show that the mortality amongst cases treated in the Hospitals under their control was 6·11 per cent. in 1893, against an average of 8·35 per cent. in the six years 1887–1892.

Enteric (Typhoid) Fever.—In the Registrar-General's 55th Annual Report, attention was directed to the unprecedentedly low enteric fever mortality in the year 1892, when the rate did not exceed 137 per million persons living, which is the lowest rate on record. The prediction hazarded in that report, on the strength of the quarterly returns furnished by the local Registrars, namely, that a very large increase in enteric fever mortality would be found to have occurred in 1893, is confirmed by the figures in the present Report. The deaths from enteric fever in that year numbered 6801, and corresponded to a rate of 229 per million persons living, against a mean rate of 184 in the decennium 1883–92. The rate in 1893 was higher than that in any previous year since 1884, when the mortality amounted to 236 in a million.

The increase in mortality from this disease was general throughout almost the whole of England and Wales; Berkshire, Buckinghamshire, Wiltshire, Devonshire, and Worcestershire being the only counties in which the rate in the year 1893 did not exceed that in 1892. The counties which showed, in 1893, the largest excess, as compared with their respective averages in the preceding 10 years were Rutlandshire, Sussex, Durham, the East Riding of Yorkshire, Dorsetshire, Lincolnshire, Herefordshire, Bedfordshire, Cornwall, Warwickshire, and Cheshire, the great increase in Sussex, which amounted to 282 per cent. of the mean rate, being mainly due to the epidemic at Worthing. The following 10 counties showed the highest rates in 1893 :—

South Wales, 252.	*Lancashire, 320.†
West Riding, 264.	North Riding, 326.
*Cheshire, 294.†	Sussex, 443.†
Lincolnshire, 295.†	*East Riding, 487.†
*Nottinghamshire, 317.†	*Durham, 565.†

In addition to the 10 counties named above as showing the highest enteric fever rates in 1893, three other counties, namely, Essex, Staffordshire, and Leicestershire, had rates in excess of the mean rate in England and Wales in that year.

In the last three reports of the Registrar-General, a table has been given showing the rates of enteric-fever mortality from the year 1890 onwards, in a group of 18 registration districts, extending from Morpeth to Middlesbrough and Guisborough, which have suffered severely from enteric fever in recent years. It will be useful to continue that table here.

TABLE C.—MORTALITY from ENTERIC FEVER in a GROUP of 18 REGISTRATION DISTRICTS, 1890–93.

Year.	Deaths.	Rates per Million.
1890	601	395
1891	465	301
1892	285	181
1893	766	480

* Showed also one of the highest county rates in each of the two preceding years.
† Higher than the rate in any of the 10 years 1883–92.

It thus appears that the mortality in this group of districts, which had been rapidly falling during the three years 1890–1–2, showed an abrupt and very serious rise in the year 1893. The rate in each of the 18 districts showed an increase, as will be seen in Table D., but the largest increases were in Darlington, Auckland, Easington, Houghton-le-Spring, Chester-le-Street, and Sunderland.

TABLE D.—MORTALITY from ENTERIC FEVER.

Morpeth - - - -	310	258	347	456	344

Diphtheria was the assigned cause of death in 9,466 instances during the year 1893. These deaths were equal to a rate of 318 per million living, a higher rate than in any previous year on record with the exception of 1858 and 1859, in which years the rates had been 339 and 517 respectively. The rate in 1893 was 82 per cent. in excess of the average rate in the ten-year period 1883–92, which had been 175 per million. Taking diphtheria and "croup" together the deaths in 1893 amounted to 11,568, or 389 per million, exceeding the rate in the previous year by 91 per million living.

All the county rates from diphtheria except the rates for Huntingdonshire, Dorsetshire, Nottinghamshire, Northumberland, and North Wales exceed their decennial averages.

In 34 counties the rates were lower than the general rate in England and Wales, the excessive diphtheria mortality being limited to comparatively few counties, especially to London, Surrey, Kent, Sussex, Middlesex, Buckinghamshire, Oxfordshire, Essex, Suffolk, and Wiltshire, which counties, with the exception of the last named, form a continuous area closely corresponding with what has been described in previous Reports as the South-Eastern diphtheritic region. The mortality from diphtheria in the ten counties above enumerated was 612 per million living, while in the

remaining thirty-five counties of England and Wales the mean rate did not exceed 197 per million.*

The deaths from *whooping-cough* numbered 10,176 and corresponded to a rate of 342 in a million living. The rate in 1893 from this disease showed a considerable decline from the rates in the three preceding years, which had been 478, 468, and 455 respectively. It was the lowest rate on record, the nearest approach having been 389 per million in the year 1840.

In each of fourteen counties, mostly agricultural in character, namely, Sussex, Bedfordshire, Suffolk, Norfolk, Wiltshire, Dorsetshire, Devonshire, Herefordshire, Warwickshire, Leicestershire, Rutlandshire, the North Riding of Yorkshire, Cumberland, and North Wales, the rate in 1893 showed an increase upon that in 1892, although in only nine of those counties did the rates in 1893 exceed the respective decennial averages, and in five of them, namely, Sussex, Bedfordshire, Devonshire, Herefordshire, and Rutlandshire, the rates in 1893 were below the rate for the whole country. In the remaining thirty-one counties the rates in 1893 were below their decennial averages; although in six of them, viz., in London, Essex, Derbyshire, Cheshire, Lancashire, and Durham the rates in 1893 exceeded the rate in England and Wales.

Influenza.—Although in most parts of the country there was a great decrease in influenza mortality during 1893 as compared with the three preceding years, nevertheless, in some parts of England and Wales, and notably in the Metropolis, the disease was still fatally prevalent.

The deaths in England and Wales specially referred to influenza during 1893 numbered 9669, as against 4523, 16,686, and 15,737 respectively in the years 1890–1–2.

If for the reasons stated in the last Report we again take the year 1889 as a standard of comparison,† we find the combined mortality from influenza and respiratory diseases to have been as shown in table E.

Continuing the estimate of the probable loss of life due to influenza according to the principle adopted in the last Report, and for the reasons there stated, we find that the excess of mortality, or in other words the loss of life actually due to influenza, in England and Wales, during 1893, was about 15,000, which being added to the 110,000 lives lost in the three previous years, makes an aggregate loss of not fewer than 125,000 lives in the four years 1890–1–2–3. Thus to every 3 deaths directly attributed to influenza in these four years about 5 more deaths really caused by the disease were returned as due to various diseases of the respiratory organs.

---

* Counties with highest Diphtheria death-rates in the year 1893.

London	758 per million.	Wiltshire	429 per million.
Essex	557 „	Suffolk	425 „
Surrey	542 „	Oxford	422 „
Sussex	473 „	Middlesex	413 „
Kent	433 „	Buckingham	367 „

Counties with lowest Diphtheria rates in 1893.

Staffordshire	114 per million.	Northumberland	132 per million.
Nottinghamshire	115 „	Cumberland	133 „
Huntingdonshire	121 „	Worcestershire	134 „
East Riding	130 „	Derbyshire	135 „

† The year 1889 was adopted in the 55th Annual Report, p. xv, as a standard for comparison, both because it may be regarded as a year of approximately normal mortality and because it immediately preceded the first outbreak of influenza.

TABLE E.—MORTALITY per 1000 living, attributed to INFLUENZA and DISEASES of the RESPIRATORY ORGANS, in the 5 Years 1889–93.

—	Rates per 1000 in each Year.					Excess in 1890–1–2–3, the rates in 1889 being taken as Standard.

The heaviest incidence of influenza in the course of 1893 was in the Metropolitan area, where the deaths attributed to that disease numbered 1513, and were equal to a rate of 351 per million. Of these 1513 deaths nearly half were registered in the fourth quarter, and not fewer than 546 within the last four weeks of the year. Towards the close of 1893, therefore, it appeared from the figures then available as though London were on the eve of yet another severe recrudescence of this disease. Subsequent returns, however, show that by the end of the sixth week of 1894 the weekly influenza deaths had again fallen to 19 in number.

With regard to the excessive mortality in 1893, attributed to diseases of the respiratory system in London, it is worthy of note, as showing that this excess was not due to its ordinary cause, namely, great or prolonged depression of temperature, that the deaths referred to bronchitis, which is the respiratory disease specially influenced by variations of temperature, were more than 7 per cent. *below* the average, whilst those referred to pneumonia were 35 per cent. *above* the average, of the preceding 10 years. If we compare the mortality in 1893 with that in the year 1889, which immediately preceded the influenza period, it will be seen that, after allowing for increase of population, the mortality from pneumonia showed an excess of 65 per cent., while that from bronchitis showed an excess of less than 10 per cent.

Diarrhœal complaints (diarrhœa, dysentery, and cholera) accounted for 29,721 deaths during the year, these deaths being in the proportion of 999 per million living, against an average proportion of 653 in the ten years 1883–92. The rate from these diseases last year exceeded the decennial average by as much as 53 per cent., and was the highest rate recorded in any year since 1884. Only four times in the past 20 years has the mortality from these diseases exceeded that in 1893. In Oxfordshire, Wiltshire, Dorsetshire, Somersetshire, Herefordshire, and Rutlandshire the rates in 1893 from diarrhœal diseases ranged from 263 to 328 per million living, while they reached 1300 in the West Riding of Yorkshire, 1447 in Leicestershire, 1471 in Durham, 1488 in Warwickshire, 1623 in Lancashire, and 2001 in the East Riding of Yorkshire.

Although in the country generally the excess in the death-rate from diarrhœal diseases was 53 per cent., the rates in London, Berkshire, Oxfordshire, Dorsetshire, and Shropshire, differed but slightly from their

respective averages. The *excess*, however, was more than 100 per cent. in Cornwall, Lincolnshire, Cheshire, and the East and North Ridings of Yorkshire.

Only 4 deaths were referred to *hydrophobia*, showing a further decline from the numbers recorded in either of the four preceding years, which had been 30, 8, 7, and 6 respectively. The deaths were fewer in 1893 than they had been in any year since 1863; the annual average in the 29 years 1864–92 having been 32.

To *puerperal fever* 3023 deaths were referred in 1893, and to other *accidents of childbirth* 2927. These deaths numbered 5950 in the aggregate, and were equal to a mortality of 6·51 to 1000 registered births, a further increase upon the rates in the preceding four years, which had been 4·05, 4·89, 5·24, and 5·78 respectively. The rate in 1893 was higher than that in any previous year since 1876, in which year it had been 5·95 per 1000.

Parasitic Diseases.—The deaths referred to parasitic diseases numbered 577, of which 434 were attributed to thrush, and the remainder to "other parasitic diseases." The deaths from diseases of this class were fewer than in any previous year on record.

Dietetic Diseases.—2610 deaths were returned under this heading in 1893, being equal to a rate of 88 per million of the population, against an average rate of 68 in the preceding decennium. The deaths directly ascribed to intemperance numbered 2174, or 73 per million, which is the highest rate on record; the rates in the three preceding years had been respectively 70, 71, and 67 per million. (Table 16.)

Constitutional Diseases.—95,389 deaths, or 3210 in each million persons living, were referred to one or other of the diseases in this category. The deaths from cancer numbered 21,135, and corresponded to an annual rate of 711 in a million. For many years prior to 1892 there had been a progressive increase in cancer mortality. In 1892, however, the rate showed a trifling decline, namely, from 692 to 690; but in 1893 the rate rose again to 711 in a million, and was higher than in any previous year on record. The deaths from phthisis were 43,632, and were equal to a rate of 1468 in a million, which is identical with the rate in the preceding year. Up to the year 1888 the mortality from phthisis had shown a steady decline for many years, but in 1889, 1890, and 1891 it rose somewhat. In 1892 and 1893, however, the rate again fell to 1468 in a million, which is the lowest rate on record. Diabetes was returned as the cause of 2082 deaths, which corresponded to a rate of 70 in a million, and showed a further increase on the rates in recent years.

Developmental Diseases accounted in the aggregate for 47,359 deaths, or 1593 in a million persons living. The deaths referred to "old age" numbered 26,528, or 892 in a million, against 1011 and 944 respectively in the previous two years. As was mentioned in the last Report the mortality from premature birth and congenital defects has shown in recent years a constant tendency to increase. The mortality in 1893 from premature birth was equal to 18·88, and that from congenital defects to 3·90 per 1000 children born, showing a still further increase on the high rates prevailing in recent years, as shown in the following Table.

TABLE F.—PREMATURE BIRTHS and CONGENITAL DEFECTS. DEATHS to 1000 BIRTHS, 1861–93.

Year.	Premature Births.	Congenital Defects.
1861–65	11·19	1·76
1866–70	11·50	1·84
1871–75	12·60	1·85
1876–80	13·38	2·39
1881	13·63	3·20
1882	13·99	3·31
1883	14·45	3·08
1884	14·42	3·15
1885	14·43	3·41
1886	15·09	3·33
1887	15·89	3·29
1888	15·98	3·45
1889	16·30	3·41
1890	17·48	3·46
1891	18·00	3·60
1892	18·46	3·83
1893	18·88	3·90

Local Diseases.—To this class 283,546, or 49·7 per cent. of the total deaths were assigned in the year 1893. These deaths were equal to a rate of 9536 in a million living, which showed a further decline from the exceptionally high rates in 1890 and 1891. The rate was also below the average in the preceding ten years. (Table B.) The deaths from diseases of the respiratory system (exclusive of croup), numbered 105,145, and were in the proportion of 3536 in each million living, as compared with 3,731, the average rate in the decennium 1883–92. Diseases of the nervous system, exclusive of convulsions, were responsible for 47,903 deaths, corresponding to a rate of 1612 in a million, which is the lowest rate recorded in any year since 1868. To diseases of the circulatory system, 48,458 deaths, or 1630 in each million living, were attributed. This rate is lower than that in any previous year since 1885, and 23 in a million below the mean rate in the ten years 1883–92. The deaths from diseases of the urinary system amounted to 13,420 or 451 per million living, being almost identical with the mean rate in the decennium 1883–92, which had been 449 in a million.

Violence.—The deaths referred in 1893 to accident or negligence numbered 17,124, and were equal to a rate of 576 per million of the population, or somewhat above the average in the previous decennium, which had been 555. The deaths ascribed to suicide were 2,599, being in the proportion of 87 per million, against 85 and 88 per million in the preceding two years. Under the heading homicide were classed 337 deaths, the rate of mortality being 11 per million. In 195 of these cases the verdict was murder, and in 142 cases manslaughter, the latter including two cases of justifiable homicide. There were 16 executions in the course of the year.

Ill-defined and Unspecified Causes.—In 26,275 cases, or 4·6 per cent. of the total deaths, the cause of death was so unsatisfactorily stated as to be useless for purposes of scientific classification—the deaths are therefore referred to this heading. The average proportion in the ten years 1883–92 had been 5·1 per cent. The reduction in the proportion of these un-

satisfactory returns was probably in great measure due to the issue from this Office in recent years of a large number of letters of inquiry addressed to medical men concerning doubtful or obscure certificates of the cause of death. The number of such letters in 1893 was 4452, the result being the transference of a large number of deaths from indefinite to definite headings; for example, 541 deaths were removed from more or less vague headings to cancer (or malignant disease), 105 to syphilis, and 219 to puerperal fever and other accidents of childbirth.

Certification of Causes of Death.—Of the 569,958 deaths registered during the year 1893, the causes of 522,783, or 91·7 per cent., were certified by registered medical practitioners, and the causes of 32,839, or 5·8 per cent., by coroners after inquest, while the causes of the remaining 14,336 deaths, or 2·5 per cent., were not certified. The 14,336 uncertified cases included deaths of infants who had been attended only by midwives, and those of persons attended by unregistered practitioners, as well as those of persons who had received no medical attendance of any kind in their last illness. In registration counties the proportions per cent. of uncertified deaths ranged from 0·7 in Middlesex, 0·9 in London, and 1·0 in Wiltshire, to 4·2 in Warwickshire, 4·6 in Huntingdonshire, 5·5 in North Wales, 5·6 in Herefordshire, and 5·7 in Westmorland. Among counties in which the proportion of uncertified deaths was greater in 1893 than it had been in 1892 were Sussex, Buckinghamshire, Leicestershire, and Westmorland; while considerable decrease was shown in Somersetshire, Nottinghamshire, Derbyshire, and Yorkshire.

Offences against the Registration Acts.—In 1893, 23 persons, on prosecution by order of the Registrar-General, were convicted of different offences against the Registration Acts, as under :—

For giving false information for registration - -	17
For making and giving false certificates of cause of death - - - - - -	3
For burying as still-born a child born alive - -	1
For giving a false declaration of still-birth - -	1
For otherwise procuring illegal burial - -	1
	23

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national registers of England and Wales were increased in the year 1893 by 1,921,878, this addition raising the aggregate number of names in the indexes, which at the end of 1893 embraced a period of 56½ years, to 87,053,427. The number of searches during 1893 in the various registers was 50,626, being 316 fewer than the number in the previous year. The number of certificates issued was 34,117, showing a decrease of 561 from the number in 1892. The fees received for searches and certificates in 1893, and paid into Her Majesty's Exchequer, amounted to 6,845*l.* 6*s.* 6*d.*, or 76*l.* 8*s.* 6*d.* less than in the previous year. (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pages xxi–xxii.

Mortality in the Army.*

The average strength of the Army at home and abroad in 1893 was 217,279, and the deaths were 1803, the rate of mortality thus being 8·3 per 1000, against 8·9 and 9·1 in the preceding two years. The mortality in the Army abroad was 10·9 per 1000, which was 1·6 per 1000 below the mean rate in the three years 1890–92; while that in the Army at home was 5·5 per 1000, against 5·4 and 4·7 in the preceding two years. (Table 29.)

Mortality in the Navy.†

The average force afloat in 1893 was 60,120. The deaths were 679, being in the proportion of 11·29 per 1000 of the strength. Of the 679 deaths, 245 were due to disease, and 434 to violence; the death-rate from disease was therefore 4·07 per 1000, and that from violence 7·21 per 1000. Of the 434 deaths from violence 392 resulted from drowning, (including 358 by the sinking of the "Victoria") 2 from heatstroke, 35 from other accidental causes, and 5 from suicide.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of ships trading to or from British ports are required, under penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. Similar returns are furnished by persons having charge of Her Majesty's Ships directly to the Registrars-General of Births and Deaths. These returns of births and deaths at sea constitute the "Marine Register Book." The entries of births and deaths of persons other than those stated to be of Scotch or Irish origin, reported to this Office, numbered respectively 189 and 3288 in the year 1893. Of the 3288 deaths, so far as could be judged by the entries, which are not always very precise, 1234 were of persons of English origin, while 139 others were of persons described simply as of British origin.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat during the year 1893 in vessels belonging to the mercantile marine of the United Kingdom (including the islands in the British seas), and registered under the Merchant Shipping Acts, was 240,974, being 761 fewer than in the preceding year. The reported deaths numbered 3172, showing a rate of 13·1 per 1000 of the strength. This rate was 0·7 per 1000 below the mean rate in the five years 1888–92, and was identical with the rate in 1889, which had been the lowest rate on record. (Table 31.)

Among *passengers* on board merchant vessels at sea 78 births and 420 deaths were reported in 1893, the births exceeding by one, and the deaths exceeding by eight, the numbers recorded in the preceding year. (Table 32.)

International Vital Statistics.

In Tables 39–56 will be found international statistics concerning the marriages, births, and deaths, in most of the European States.

---

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

† Based upon returns furnished by the Director-General of the Medical Department of the Navy.

A comparison of the death-rate in 1893, in each country from which a return was received, with the death-rates in preceding years shows that the mortality was generally somewhat below that of recent years, particularly in Hungary, in the Netherlands, in Belgium, and in Italy; but Switzerland and the German Empire experienced a slightly increased mortality.

In previous reports it has been pointed out that as the sex and age distribution of the population varies greatly in different countries, and as the rates largely depend on such distribution, the rates in one country cannot safely be compared with the rates in another, without correction for this difference in the constitution of the several populations.

In order to allow of fair comparison, it is most desirable that the several countries should agree upon some "Standard population," that is to say, a population with fixed age and sex distribution, for international use; so that the birth, marriage, and death rates for each country may be calculated by this standard. I again commend this suggestion to the notice of the respective Governments.

I have the honour to be,
Sir,
Your faithful Servant,
BRYDGES P. HENNIKER,
Registrar-General.

General Register Office, Somerset House,
5th December, 1894.

Remarks on the Meteorology of the Year 1893.*

By James Glaisher, Esq., F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The readings of the barometer were above their averages till February 7th, being as much as 0·53 in. above on January 19th, the mean daily excess for the 38 days being 0·13 in.; from February 8th to March 2nd it was below, being particularly so on the 21st, 22nd, and 26th of February, when it was as much as 1·29 in., 0·98 in., and 0·99 in. respectively below, and on several other days it was as much as three-quarters of an inch below its average, the mean daily deficiency for the 23 days ending March 2nd being 0·44 in.; from March 3rd to the 11th it was above, the mean daily excess being 0·14 in.; from March 12th to the 17th it was below, the mean daily deficiency being 0·26 in.; from March 18th to May 14th it was generally above, the mean daily excess being 0·23 in.; from May 15th to the 24th it was below, the mean daily deficiency being 0·16 in.; from May 25th to June 18th it was above its average, the mean daily excess being 0·16 in.; from June 19th to August 5th it was generally below, being as much as 0·70 in. below on June 23rd, the mean daily deficiency for the 48 days ending August 5th being 0·14 in.; from August 6th to the 17th it was above, the mean daily excess being 0·13 in.; from August 18th to the 23rd it was below, the mean daily deficiency being 0·18 in.; from August 24th to September 5th it was above, the mean daily excess being 0·09 in.; from September 6th to the 10th it was below, the mean daily deficiency being 0·27 in.; from September 11th to the 15th it was above, the mean daily excess being 0·11 in.; from September 16th to October 9th it was generally below, the mean daily deficiency for the 24 days being 0·31 in.; from October 10th to November 13th it was generally above, the mean daily excess being 0·17 in.; from November 14th to the 19th it was below, being particularly so on the 17th and 18th when it was as much as 0·79 in. and 0·70 in. respectively below, the mean daily deficiency for the 6 days being 0·36 in.; from November 20th to December 6th it was above, the mean daily excess being 0·24 in.; from December 7th to the 14th it was below, being particularly so on the 13th, when it was as much as 0·80 in. below, and on several other days it was as much as half an inch below its average, the mean daily deficiency for the 8 days being 0·45 in.; from December 15th to the 18th it was above, the mean daily excess being 0·34 in.; from December 19th to the 22nd it was below, being as much as 1·15 in. below its average on the 20th, the mean daily deficiency being 0·52 in.; and from December 23rd to the 31st it was above its average, being more than half an inch in excess on two or three days, the mean daily excess for the 9 days ending December 31st being 0·38 in.

The highest reading of the barometer at the height of 159 feet above the sea was 30·536 ins. on December 29th; and the lowest was 28·561 ins. on February 21st. The yearly range was 1·975 in.

Temperature.—The temperature of the air was below its average till January 18th, being particularly so on the 2nd, 3rd, 4th, and 5th, the mean daily deficiency for these 4 days being 14°·4; the mean daily deficiency for the 18 days ending January 18th was 6°·7; from January 19th to February 21st it was generally above its average, being particularly

* For Meteorological Tables, *see* pp. lx–lxv.

so on the 31st of January and 19th of February, when it was as much as 10°·6 and 11°·6 respectively above, the mean daily excess for the 34 days being 3°·5; from February 22nd to the 28th it was cold and below its average, the mean daily deficiency being 3°·9; from March 1st to the 16th it was above, the mean daily excess being 5°·3; from March 17th to the 21st it was below, the mean daily deficiency being 4°·3; from March 22nd to May 27th it was generally above, being particularly so on the 19th, 20th, and 21st of April and on the 13th of May, when it was as much as 10°·3, 10°·8, 11°·0, and 10°·9 respectively above, and on several other days in this period it was as much as 8° and 9° above its average, the mean daily excess for the 69 days ending May 29th being 3°·7; from May 30th to June 3rd it was below, the mean daily deficiency being 3°·9; from June 4th to the 19th it was above, being particularly so from June 15th to the 19th, the mean daily excess for the 4 days being 10°·3; the mean daily excess for the 16 days ending June 19th was 4°·5; from June 20th to the 26th it was below, the mean daily deficiency being 3°·1; from June 27th to July 11th it was above, being as much as 11°·9 in excess of the average on July 8th, the mean daily excess being 4°·2; from July 12th to August 7th it was generally below, the mean daily deficiency being 2°·1; from August 8th to the 22nd it was above its average, being particularly so from the 15th to the 18th, the mean daily excess for these 4 days being 13°·1; and the mean daily excess for the 15 days ending August 22nd was 8°·4; from August 23rd to the 29th it was below, the mean daily deficiency being 2°·8; from August 30th to September 8th it was above, the mean daily excess being 2°·5; from September 9th to the 13th it was below, the mean daily deficiency being 3°·2; from September 14th to the 20th it was above, the mean daily excess being 2°·6; from September 21st to the 26th it was below, the mean daily deficiency being 6°·0; from September 27th to October 29th it was generally above its average, being as much as 10°·6 and 10°·3 above on October 15th and 16th respectively; the mean daily excess for the 33 days ending October 29th was 2°·0; from October 30th to November 27th it was below, the mean daily deficiency being 3°·2; from November 28th to the 30th it was above, the mean daily excess being 7°·3; from December 1st to the 5th it was below, being particularly so on the 2nd and 3rd of December, when it was as much as 11°·4 and 10°·4 respectively below its average, the mean daily deficiency being 5°·7; from December 6th to the 28th it was above, the mean daily excess being 3°·2; and from December 29th to the end of the year it was below its average, being as much as 10°·3 below on the 31st, the mean daily deficiency being 5°·5.

The highest temperatures of the air were at the Royal Observatory 80°·5, and at Barnet and Cambridge 80°·1; and the lowest were at Salisbury 19°·8, at Barnet 19°·9, and at Carlisle 21°·9.

Rainfall.—The fall of rain was below its average in January, above in February, and below its average again in March; the total fall in the three months at Greenwich was 4·60 ins., or 0·35 in. below the average. The fall of rain was below its average in each of the months of April, May, and June; the total fall in the three months at Greenwich was 1·47 in., or 4·31 ins. below the average. The fall of rain was above its average in July, and below in both August and September. The total fall in the three months at Greenwich was 5·87 ins. or 1·44 in. below the average. The fall of rain was above its average in October, below in November, and above its average again in December; the total fall in the three months at Greenwich was 8·19 ins. or 1·12 in. above the average.

The heaviest falls of rain at our stations were at Stonyhurst 50·56 ins., at Bath 35·17 ins., and at Barnstaple 32·02 ins.

The least falls were at Somerleyton 17·15 ins., at Lowestoft 17·47 ins., and at Tottenham 18·57 ins.

The greatest number of days of rain were at Stonyhurst 212, at Carlisle 189, and at Guernsey 184.

The smallest number of rainy days were at Barnet 125, and at Tottenham and Oxford 135.

Thunderstorms occurred on 61 days at the different stations during the year; of these 12 were in July, 9 in June, 8 in each of the months of May, August, and October, 7 in September, 3 in both April and December, 2 in February, one in November, and none were reported in either January or March.

Thunder was heard but lightning was not seen on 59 days during the year; of these 12 were in both June and July, 9 in May, 8 in August, 6 in both September and October, 3 in December, 2 in April, and one in February.

Lightning was seen but thunder was not heard on 53 days during the year; of these 12 were in October, 9 in August, 6 in both July and September, 5 in both May and December, 4 in June, 2 in both February and April, and one in both January and March.

Solar halos were seen on 80 days during the year; of these 13 were in May, 11 in March, 10 in April, 8 in September, 7 in February, 6 in both January and August, 5 in both July and October, 4 in June, 3 in December, and 2 in November.

Lunar halos were seen on 34 days during the year; of these 11 were in March, 4 in both January and September, 3 in each of the months of February, April, and October, and 2 in each of the months of May, August, and December.

Snow fell on 60 days during the year; of these 18 were in January, 11 in each of the months of February, November, and December; 4 in March; 2 in both September and October; and one in April. The last fall in the spring was on April 17th at Halifax; none fell in May, June, July, or August; and the first fall in the autumn was on September 22nd at Halifax.

Hail fell on 73 days during the year; of these 13 were in February, 11 in November, 9 in December, 8 in both January and October, 6 in August, 4 in each of the months of March, June, and September, 3 in May, 2 in April, and one in July.

Fog prevailed on 126 days during the year; of these 20 were in January, 19 in March, 13 in both October and December, 11 in both April and November, 9 in both February and August, 8 in both June and September, and 5 in May.

* Deaths from Cerebro-spinal Fever prior to 1877 were classed with Typhus, but, since that date, have been included under this heading.

† Deaths of children under 5 years of age from Remittent Fever were classed with Enteric Fever from 1869 to 1880, but in subsequent years have been included under this heading.

TABLE 15 *(continued)*.—ENGLAND.—**Deaths from Various Causes, 1869–93.**

CAUSE OF DEATH.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.	1893.

* Deaths from this cause prior to 1881 were classed, partly with "Diseases of Respiratory System" and partly with "Ill-defined and not specified Causes."
† Deaths from these diseases prior to 1881 were classed with "Other Tubercular and Scrofulous Diseases."

TABLE **16.**—ENGLAND.—**Annual Death-rates,** from **Various Causes,** to a **Million Persons living, 1869–93.**

(Decimals are omitted, the nearest whole number being taken. When the Deaths from any Cause were too few to give a rate of 0·5, a cipher is inserted.)

CAUSE OF DEATH.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.	1893.

* For the purposes of this table London includes, for recent years, the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Hospitals and Asylums situated outside Registration London. Some of the figures for 1893 may differ, therefore, from those in Tables 10, 20, and 23.

TABLE 20.—ENGLAND.—**Death-rates from several Causes in Registration Counties, 1893.**

* The Populations of the counties have been estimated to the middle of 1893 from the numbers enumerated at the Censuses in 1881 and 1891.

TABLE 21.—ENGLAND.—**Death-rates of Persons, Males, and Females, from various Causes, 1893.**

CAUSE OF DEATH.	Deaths to 1,000,000 living. Persons.	Males.	Females.
ALL CAUSES	19170	20262	18145
Small-pox	49	62	37
Chicken-pox	4	5	4
Measles	374	401	348
Epidemic Rose Rash	2	1	2
Scarlet Fever	235	238	232
Typhus	5	5	4
Relapsing Fever	0	0	0
Influenza	325	334	318
Whooping-cough	342	313	369
Mumps	3	3	2
Diphtheria	318	323	314
Cerebro-spinal Fever	0	1	0
Simple and Ill-defined Fever	9	9	9
Enteric Fever	229	251	208
Other Miasmatic Diseases	0	0	0
Cholera	45	53	38
Diarrhœa, Dysentery	954	1031	882
Remittent Fever	1	1	1
Ague	3	3	2
Hydrophobia	0	0	0
Glanders	0	0	-
Splenic Fever	0	0	0
Cow-pox and other Effects of Vaccination	2	2	2
Syphilis	72	83	63
Gonorrhœa, Stricture of Urethra	10	20	1
Phagedæna	3	2	3
Erysipelas	65	71	58
Pyæmia, Septicæmia	13	13	12
Puerperal Fever	102	-	198
Thrush	15	15	14
Other Dis. from Vegetable parasites	0	1	0
Hydatid Disease	2	2	2
Other Dis. from Animal parasites	3	2	3
Starvation, Want of Breast Milk	14	15	13
Scurvy	1	1	0
Intemperance: Chron. Alcoholism	57	64	51
Intemperance: Delirium Tremens	16	28	4
Rheumatic Fever, Rheumatism of Heart	104	107	100
Rheumatism	30	28	31
Gout	21	33	9
Rickets	42	49	35
Cancer	711	550	863
Tabes Mesenterica	265	286	245
Tubercular Meningitis (Acute Hydrocephalus)	226	254	200
Phthisis	1468	1639	1307
Other Forms of Tuberculosis, Scrofula	186	203	169
Purpura, Hæmorrhagic Diathesis	12	13	11
Anæmia, Chlorosis, Leucocythæmia	51	38	63
Diabetes Mellitus	70	81	60
Other Constitutional Dis.	24	19	29
Premature Birth	581	671	495
Atelectasis	33	41	26
Cyanosis	33	39	27
Spina Bifida	21	20	23
Imperforate Anus	6	8	3
Cleft Palate, Harelip	8	8	7
Other Congenital Defects	19	21	17
Old Age	892	778	1001

CAUSE OF DEATH.	Deaths to 1,000,000 living. Persons.	Males.	Females.
Inflammation of Brain or its Membranes	273	296	251
Apoplexy	570	540	599
Softening of Brain	102	113	91
Hemiplegia, Brain Paralysis	254	241	266
Paralysis Agitans	9	12	7
Insanity, General Paralysis of Insane	100	122	79
Chorea	4	3	6
Epilepsy	95	100	89
Convulsions	701	804	605
Laryngismus Stridulus	20	24	17
Idiopathic Tetanus	1	2	1
Paraplexia, Diseases of Spinal Cord	68	83	55
Other Diseases of Nervous System	116	119	113
Otitis, Otorrhœa	26	31	21
Epistaxis and Diseases of Nose	3	3	3
Ophthalmia and Diseases of Eye	2	3	2
Endocarditis, Valvular Dis.	307	295	319
Pericarditis	22	26	18
Hypertrophy of Heart	9	10	7
Angina Pectoris	22	28	16
Syncope	54	59	50
Aneurism	29	46	13
Senile Gangrene	42	49	35
Embolism, Thrombosis	37	32	45
Phlebitis	6	5	6
Varicose Veins	4	2	5
Other Diseases of Circulatory System	1098	1051	1142
Laryngitis	56	61	50
Croup	71	80	62
Other Diseases of Larynx and Trachea	5	6	4
Emphysema, Asthma	78	98	60
Bronchitis	1906	1926	1890
Pneumonia	1286	1534	1053
Pleurisy	62	76	48
Other Diseases of Respiratory System	143	160	126
Stomatitis	23	24	22
Dentition	136	153	121
Sore Throat, Quinsy	24	26	21
Dyspepsia	22	22	21
Hæmatemesis	10	11	8
Melæna	5	5	4

NOTE.—*Up to and including* 1886 masters were excluded from the above employment and mortality figures; the latter of which contained some cases of men who died in colonial vessels and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column.

Since 1886 masters are included in both columns, and the employment and mortality figures relate only to persons employed in vessels registered under the Merchant Shipping Acts belonging to the United Kingdom, the Isle of Man, and Channel Islands. Deaths occurring in the United Kingdom after the seamen have been discharged from their ships, and on vessels employed exclusively in rivers and inland navigation, and on yachts, are not included.

* The prices of Consols for the years 1844–52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1844–88 the prices relate to stock bearing 3 per cent. interest, for 1889–93 to stock bearing 2¾ per cent.

† From the Board of Trade Statistical Abstract.

‡ The Registrar-General is unable to give precise information as to the price of meat for the years 1889–93.

§ The prices of coal are furnished by the Mineral Statistics Department of the Home Office.

‖ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the year 1864.

1893	—	—	—	—	—	—	—	—

NOTE.—The population in the four years 1862–65 and in the years 1867–69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865–66, and war raged in 1870 and 1871.

1893	—	—	—	—	—	—	—	—

NOTE.—Statistics for the 7 years 1871-77 were not issued owing to the disturbed state of the country. The decline in registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred in that year.

* Census year.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for the end of each of the other years the population is estimated on the assumption that the rate of increase which prevailed in the last inter-censal period has since been maintained.

* Census year

TABLE 57.—ENGLAND. **Changes** in the **Constitution** of **Registration Districts** and **Sub-districts** during the Year **1893.**

N.B.—(1.) The Name of the DISTRICT is in SMALL CAPITALS, that of the *Sub-district* in *Italics*.
(2.) The Populations quoted are the revised Numbers enumerated at the Census of 1891.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1893.	
6	MARYLEBONE - -	1 September	The sub-districts of *All Souls* and *Cavendish Square* were united under the name of *All Souls* (population 37,713).
13	HOLBORN - - -	1 June -	The sub-districts of *St. Andrew Eastern* and *Saffron Hill* were united under the name of *St. Andrew Eastern* (population 15,343).
41	BROMLEY - -	1 August -	The sub-districts of *Bromley* and *Chislehurst* were re-arranged into three sub-districts, viz.:—1. *Bromley* sub-district, consisting of the parishes of Bromley, Hayes, Keston, and Downe (aggregate population 23,815); 2. *Beckenham* sub-district, consisting of the parishes of Beckenham and West Wickham (aggregate population 21,969); and 3. *Chislehurst* sub-district, consisting of the parishes of Cudham, Knockholt, Chelsfield, Farnborough, Orpington, St. Mary Cray, St. Paul's Cray, Chislehurst, Mottingham, Foots Cray, and North Cray (aggregate population 23,469).
88	PORTSEA ISLAND -	1 June -	Part of the sub-district of *Landport*, viz.: the part of the parish of Portsea situated south of King's Road and Elm Grove including the south sides of those roads, and west of Victoria, Chester and Lennox Roads including the west sides of those roads in a straight line to the east end of Southsea Castle (population 10,657) was added to *Portsmouth Town* sub-district which was re-named *Portsmouth and Southsea* sub-district.
93 94	CHRISTCHURCH - - RINGWOOD - -	1 January -	Part of the parish of Christchurch (population 91) in the sub-district of *Christchurch* was transferred to the parish of Ringwood in the sub-district of *Ringwood*.
166	OUNDLE - - - -	1 July -	The sub-districts of *Oundle* and *Fotheringhay* were united under the name of *Oundle* (population 10,938).
225	NORWICH - -	1 January -	The sub-districts of *Mancroft* and *West Wymer* were united under the name of *West Wymer* (population 53,034).
266	SHERBORNE - - -	1 October -	The sub-districts of *Sherborne* and *Bradford Abbas* were united under the name of *Sherborne* (population 8,517).
309	CHARD - - -	1 September	The parish of Knowle St. Giles (population 92) was transferred from the sub-district of *Combe St. Nicholas* to that of *Ilminster*.
310	YEOVIL - - - -	1 January -	The parishes comprised within the Registration District of YEOVIL were re-arranged into four sub-districts, viz.:—1. *Coker* sub-district, consisting of the parishes of Haselbury Plucknett, North Perrott, Hardington Mandeville, Pendomer, Sutton Bingham, Closworth, Barwick, East Coker, West Coker, Odcombe, East Chinnock, West Chinnock, and Brimpton (aggregate population 5,416); 2. *South Petherton* sub-district, consisting of the parishes of Chiselborough, Norton-under-Hamdon, and South Petherton (aggregate population 3,050); 3. *Martock* sub-district, consisting of the parishes of Martock, Tintinhull, Stoke-under-Hamdon, Montacute, Thorne, and Lufton (aggregate population 5,988); and 4. *Yeovil* sub-district, consisting of the parishes of Chilthorne Domer, Ilchester, Sock Dennis, Northover, Yeovilton, Limington, Ashington, Chilton Cantelo, Pudymore Milton, West Camel, Preston Plucknett, Yeovil, and Mudford (aggregate population 13,448).

Table 57 (*continued*).—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1893.

No. of District.	Name of Registration District.	Date of Change.	Nature of Change.
325	WESTBURY-ON-SEVERN	1893. 1 July -	The parishes comprised within the two sub-districts of the Registration District of WESTBURY-ON-SEVERN were re-arranged and called 1. *Newnham* and 2. *East Dean*: the former consisting of the parishes of Blaisdon, Westbury-on-Severn, Minsterworth, Churcham, Bulley, Huntley, Longhope, Awre, Newnham, and Flaxley (aggregate population 7,245); and the latter consisting of the parishes of East Dean, Little Dean, Abinghall, and Mitcheldean (aggregate population 16,426).
329 330	STROUD - - - TETBURY - - -	1 October	The parish of Avening (population 894) was transferred from *Horsley* sub-district in the district of STROUD to *Tetbury* sub-district in the district of TETBURY.
364 448	LEEK - - - CONGLETON - -	1 October -	The parish of Biddulph (population 5290) was transferred to *Congleton* sub-district from *Norton* sub-district in the district of LEEK.
386	BIRMINGHAM - -	1 January -	The sub-districts of *St. Thomas* and *St. Martin* were united under the name of *St. Martin* (population 72,237).
424 425	CAISTOR - - - GLANFORD BRIGG -	1 January -	Part of the parish of Bigby (population 138), in the sub-district of *Caistor* was transferred to the parish of Glanford Brigg in the sub-district of *Brigg*.
447	NORTHWICH - - -	1 February -	The parishes of Shurlach, Birches, and Hulse (population 221) were transferred from the sub-district of *Northwich* to that of *Middlewich*; the parish of Wallerscoat (population 10) was transferred from the sub-district of *Weaverham* to that of *Northwich*; and the parish of Occlestone (population 96) was transferred from the sub-district of *Middlewich* to that of *Over*.
448 364	CONGLETON - - LEEK - - - -	1 October -	The parish of Biddulph (population 5,290) was transferred from the sub-district of *Congleton* to the sub-district of *Norton* in the district of LEEK.
453	LIVERPOOL - -	1 September	The sub-districts of *Howard Street* and *Islington* were united under the name of *Islington* (population 34,807).
491	WHARFEDALE - -	1 September	The townships of Denton, Ilkley, Middleton, and Nesfield-with-Langbar (population 6,240) were separated from the sub-district of *Otley* and constituted a new sub-district called *Ilkley*.
579	KENDAL - - -	1 April -	The townships of Preston Patrick and Preston Richard from Kirkby Lonsdale sub-district and the township of Stainton from *Milnthorpe* sub-district (aggregate population 1,905) wese transferred to *Grayrigg* sub-district; and the townships of Burton in Kendal, Farleton, Holme, and Dalton (aggregate population 1,729) were transferred from *Kirkby Lonsdale* sub-district to *Milnthorpe* sub-district.
601	CARDIGAN - - -	1 March -	The parishes of Llangoedmore, Verwick, and Mount (aggregate population 1,206) were transferred from the sub-district of *Cardigan* to that of *Llandygwydd*; and the parishes of Manordivey, and Llanfihangel-Penbedw (aggregate population 1,011) were transferred from the sub-district of *Llandygwydd* to that of *Cardigan*.
611	KNIGHTON - -	1 January -	That part of the parish of Llanfihangel Beguildy in *Llanbister* sub-district (population 549) was transferred to *Knighton* sub-district.

NOTE.—No change affecting the population of any Registration District or Sub-district was made during 1893 under the provisions of the Divided Parishes and Poor Law Amendment Acts, 1876 and 1879.

* The *Registration Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, *see* pages 64-67.

† *See* footnote ¥, p. 38, and footnote *, p. 45.

* The 633 *Registration Districts* (Paddington 1a, North Bierley 497b, and Holyhead 631 having been constituted Registration Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2107 in number at the end of the year 1893) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates a Workhouse Establishment receiving inmates from other Districts than the one in which it stands; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1893 are given on pages 71-94.

‡ 6: 1.—On 1st September 1893 the sub-districts of *Cavendish Square* and *All Souls* were united for registration purposes and called *All Souls*.

* 88 : 3, 4.—On 1st June 1893 part of the sub-district of *Landport* was added to *Portsmouth Town*, which was re-named *Portsmouth and Southsea* sub-district. As the births and deaths in the revised areas from the beginning of the year could not be ascertained, the figures for the two sub districts taken together are shown in the Table.

† 93 : 1 and 94 : 1.—On 1st January 1893 part of the parish of Christchurch was transferred from the sub district of *Christchurch* to that of *Ringwood*.

* 448 : 2.—On 1st October 1893 the parish of Biddulph was transferred from the sub-district of *Congleton* to the sub-district of *Norton* in the district of LEEK (364 : 1). The Births and Deaths are shown as if the change had taken place at the beginning of the year.

† 450.—The District of CHESTER comprises the three Poor Law Unions of Tarvin (Tattenhall sub-district), Chester (Chester Castle and Chester Cathedral sub-districts), and Hawarden (Hawarden sub-district).

‡ 453 : 6.—On 1st September 1893 the sub districts of *Howard Street* and *Islington* were united for registration purposes and called *Islington*.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1893.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1893 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1950 Institutions; of which 754 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 1102 Hospitals or Infirmaries; and 94 Lunatic Asylums. The Lunatic Asylums are mostly County and Borough Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1950 Institutions 70,463 deaths were registered during the year, or 12·4 per cent. of the total deaths in England and Wales, against 11·7 and 11·9 per cent. in the preceding two years; 40,577 occurred in Workhouses, 23,457 in Hospitals, and 6429 in Lunatic Asylums. The proportion to total deaths was 7·12 per cent. in Workhouses, 4·12 in Hospitals, and 1·13 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 7·17 and 7·10 per cent. in 1891 and 1892, was 7·12 per cent. in 1893.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1893.

* When a person dies from an operation performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 12083 ACCIDENTS, 132 are stated to have occurred to Men in a state of INTOXICATION. In 396 other cases Death was accelerated by the supervention of DELIRIUM TREMENS, ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

Causes inducing or accelerating Deaths from Accident.	All Ages.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	132	-	-	-	-	-	-	-	-	-	1	5	20	38	31	21	14	2	-
Acceleration by: Delirium Tremens	19	-	-	-	-	-	-	-	-	-	-	2	1	8	6	2		-	-
Acceleration by: Erysipelas	46	-	-	-	-	-	-	-	1	-	-	2	4	5	9	10	10	3	2
Acceleration by: Mortification	44	-	-	-	-	2	-	2	2	2	-	1	6	5	9	7	9	1	-
Acceleration by: Pyæmia	194	-	1	2	1	2	-	6	6	5	13	11	22	31	30	39	23	7	1
Acceleration by: Tetanus *	93	1	-	-	-	1	2	4	7	10	14	6	15	15	13	8	1	-	-

* Cases of tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (*see* page 114).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date three new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), the District of Bradford (497) into Bradford (497*a*) and North Bierley (497*b*), and the District of Anglesey (630) into Anglesey (630) and Holyhead (631).

For names of Towns, such as Bournemouth, Maidenhead, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208–217) *and "Index of certain Towns"* (pp. 220, 221).

INDEX OF REGISTRATION SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	366; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	137; 4
